Dhanvika Nakka

Hyderabad, Telangana, India | +91 6304350862 | nakkadhanvika5@gmail.com | linkedin.com/in/dhan1801 | github.com/dhan1801

Professional Summary

Computer Science graduate (B.S., UMass Lowell, GPA 3.856/4.0) with hands-on project experience in C++, Java, C#, and SQL. Built an Android student portal, a Unity VR game, and a C++ image encryption tool. Available to join immediately; seeking fresher and internship roles in software engineering and related fields.

Education

University of Massachusetts Lowell — Lowell, MA
Bachelor of Science in Computer Science *GPA: 3.856/4.0* — *Graduated May 2026*

- Dean's List (Fall 2025)
- Relevant Coursework: Data Structures and Algorithms, DBMS, Operating Systems, Software Engineering, Object-Oriented Programming

Technical Skills

Languages: C++, Java, C#, SQL, PHP
Familiar with: Python, C
Technologies: Unity, Android, SFML, Boost.Test, Git, Linux
Concepts: Data Structures, Algorithms, Object-Oriented Programming, Database Design, SDLC

Projects

Student Portal Mobile Application | *Android, Java, PHP, SQL* — github.com/dhan1801/Student-Portal

- Developed an Android student portal with a 3-person team in Java, PHP, and SQL, adding accounts and threaded discussions to the schema and a transcript module computing GPA and credits.
- Implemented discussion board CRUD operations and a transcript rule that shows "Evaluation Required" in place of a grade until a course evaluation is submitted.

Robots 2026 – VR Game | *Unity, C#, XR Toolkit* — github.com/dhan1801/Robots-2026

- Built Robots 2026, a 5-person Unity and C# VR game, implementing ray interactors, a tablet lock requiring players to interact with all 4 robots before answering, and win/lose scene transitions.
- Wrote the 5 quiz questions and per-question robot opinions displayed when a robot is selected; demonstrated the game in class.

FibLFSR Image Encryption Tool | *C++, SFML* — github.com/dhan1801/FibLFSR-PhotoMagic

- Engineered a C++ image encryption tool using a 16-bit Fibonacci LFSR, XORing pixel RGB values with generated bits, supporting password-derived seeds, and validating the LFSR with Boost unit tests.
- Displayed original and transformed images in separate SFML windows and saved the output image.

Sokoban Puzzle Game | *C++, SFML* — github.com/dhan1801/Sokoban

- Implemented movement mechanics, undo/redo functionality, and collision detection using data structures and state tracking.
- Implemented win detection with a victory sound and loaded six levels from text files.

Experience

Workshop Facilitator and Zoom Host, Ethical Hacking Course — May 2024 – Oct 2024
HackersUnskool — *Remote*

- Hosted and moderated Zoom workshop sessions for an ethical hacking course.
- Simplified technical concepts for non-technical participants.
- Managed attendance tracking and certification workflows.

Social Media Support — Feb 2024 – Oct 2024
Llama Bee – The Useful Company — *Remote*

- Scheduled content and managed community interactions on social media platforms.
- Reviewed posts for consistency to support a more structured posting workflow.

Student Worker, Food Service and Catering — May 2025 – May 2026
Tsongas Center, UMass Lowell — *Lowell, MA*

- Supported high-volume service at large-scale events with accurate, efficient customer service.
- Balanced part-time work with full-time coursework.

Certifications

Ethical Hacking Workshop, IIIT Hyderabad, April 2024

Activities and Honors

- Member, Game Development Club
